MTE Catalyst Support takes over activities BRUbin B.V.

Oude Tonge, 26 May 2020

European market leader MTE Catalyst Support B.V. takes over all sales activities from former BRUbin catalyst bins per 01/06/2020.

With an average of 60 % market share, MTE Catalyst Support is worldwide known for its inert ceramic and alumina support in the (petro)chemical and refinery industry. By adapting all sales activities for MTE catalyst bins, MTE Catalyst Support strengthens its position as a total solution provider. MTE Catalyst Support is part of MTE Group BV with its headquarter situated in Oude Tonge, the Netherlands.

The 2 m³ MTE catalyst bin is designed for loading and unloading of fresh and spent catalyst during turnarounds. With its stainless steel body and round shape, the MTE bin is suitable for almost any type of catalyst, including PMG catalyst. Together with full-licensed ADR transport MTE Catalyst Support expands its expertise, product- range and services

Roland Langstraat, manager MTE Catalyst Support, states: “With the take-over of all sales activities of the MTE catalyst bins, we are not only increasing our ability to take on bigger and more complicated projects, but also tighten our bond with our customers and develop new opportunities for new customers. We are convinced the MTE bins, which already have participated on a small scale in the market, can add a high value for MTE Group BV.”

“Our firm belief is that the catalyst bins, the cooperation with regenerators and costumers can fulfil the demands for this market. We are looking forward to this additional product in the wide variety of MTE Group B.V.”
